Mr. Doug Neeley Air and Radiation Technology Branch US EPA Region IV 61 Forsyth Street SW Atlanta, GA 30303

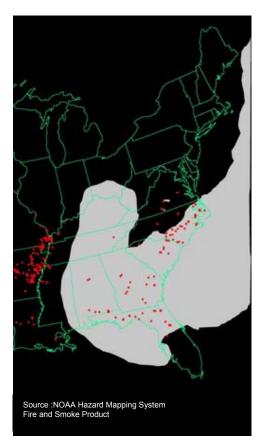

Re: CY 2003 Flagged particulate monitoring data

Dear Mr. Neeley:

During the period of June 23 – June 28, 2003 many of the ambient monitoring sites in South Carolina were impacted by smoke from wildfires across the southeast and Canada. The smoke from the fires was visible in all or part of South Carolina during this period. An extended period or relatively stagnant air contributed to the concentrations and accumulation of smoke from fires in Florida, Georgia and the coastal Carolinas. We have applied exceptional event flags to the to the  $PM_{2.5}$  and  $PM_{10}$  data in AQS that was most obviously impacted by the smoke.

The impact of the smoke was most apparent in the widespread elevated concentrations of PM2.5. Although less obvious than the fine fraction, it was felt it is appropriate to flag the concurrent PM10 data due to the significant proportion of fine mass contained in the larger fraction.

I have included a disk containing satellite imagery, back trajectories and NOAA wildfire products related to the period that data has been flagged. The specific sites and dates flagged are listed in the attached table and in the accompanying documentation.

We believe the data flagging is consistent with criteria described in <u>Guideline for the Identification and Use of Air Quality Data Affected by Exceptional Events</u> (EPA-450/4-86-007) and request that the concurring flag be applied.

If additional supporting information is needed to support your concurrence with these data flags, please contact me at (803) 896-0902.

Sincerely yours,

Scott A. Reynolds, Director Division of Air Quality Analysis
